EMIRATES GROUP · ONE EMPLOYEE, ONE TRUTH

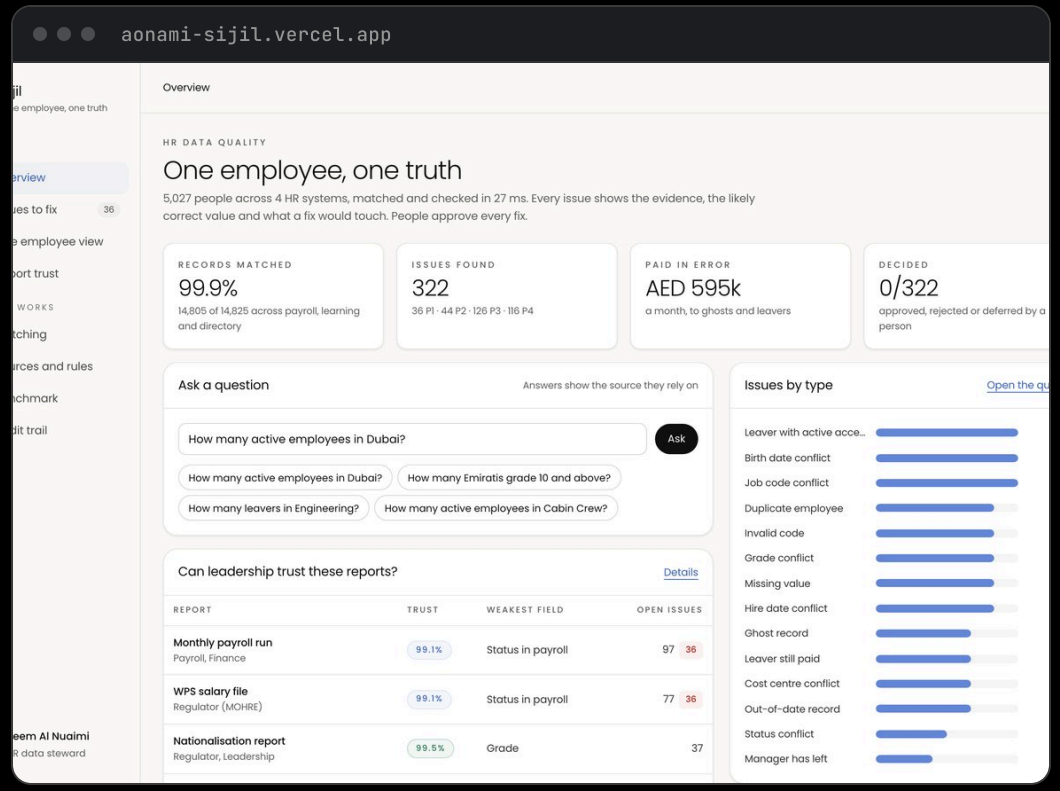

Sijil

The same employee, matched across every HR system. Every inconsistency explained.

LIVE PROTOTYPE

aonami-sijil.vercel.app

Press Guided demo. Runs on synthetic sample data.

The same employee, held differently in every system.

Core HR, payroll, learning and the directory each hold their own copy of an employee. They drift apart: leavers stay on payroll, duplicates distort headcount, and reports to leadership and the regulator inherit the errors.

AVERAGE COST OF POOR DATA QUALITY

$12.9m

a year per organisation, Gartner. [1]

PAID IN ERROR ON OUR SAMPLE

AED 595k

a month, to ghosts and leavers.

RECORDS MATCHED

99.9%

14,805 of 14,825 on our sample.

AT EMIRATES' SCALE

The Emirates Group workforce grew 8% to 130,919 people in 2025-26, with more than 4,000 UAE nationals. [5]

HOW THE CHALLENGE IS JUDGED

JUDGING CRITERION	WEIGHT
Detection and matching accuracy	30%
Explanation and prioritisation	25%
Responsible AI and security	20%
Deployability and reuse	15%
Team and pilot readiness	10%

Source: challenge brief [2]

Core HR is the spine. Everything else is joined to it.

Deterministic, explainable matching, then checks against the data dictionary and the other systems. The dependencies file ranks each issue by what it breaks. No cloud AI: the same pack always gives the same issues.

1 Connect

Four sources, any headers or date formats.

2 Match

ID, then email, then name and birth date, transliterations folded.

3 Check

Duplicates, ghosts, conflicts, missing, invalid, out of date.

4 Suggest

Most likely value from the system of record and dictionary rules.

5 Rank

Money at stake, security, and every report that uses the field.

6 Approve

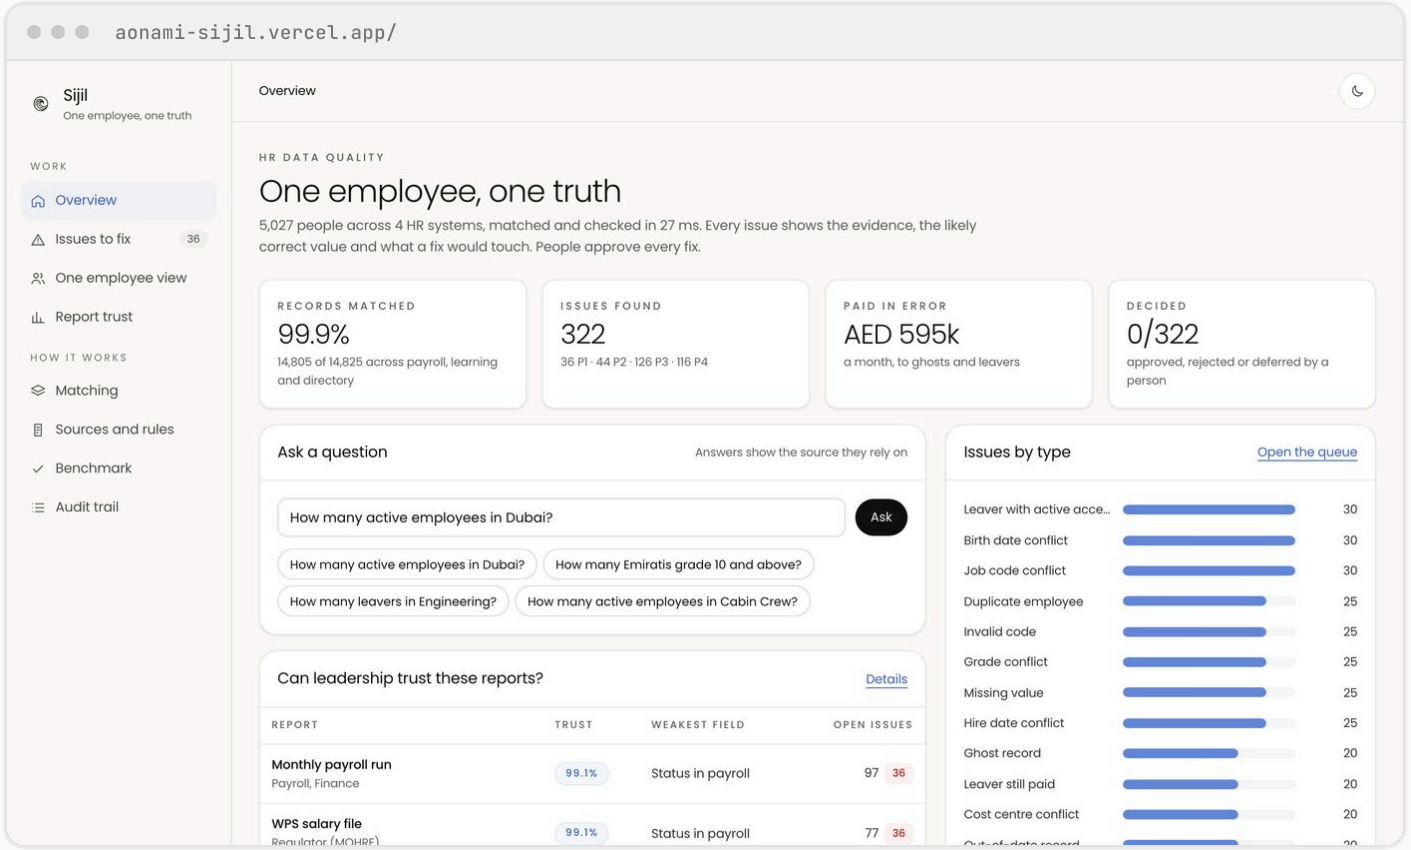

Downstream view first; a person approves; nothing written back.

- **Ambiguous matches are never forced.**
- **Every suggestion shows its sources** and the rule behind it.
- **Trust scores** per field and per report.

AI WHERE IT HELPS

Matching and checks are readable rules, so the same pack always gives the same issues. Optional: an on-premise model could help map a new source's columns, reviewed by a steward; it would never match people or decide a fix.

Answers that show their source, and reports leadership can trust.

Ask a question

"How many active employees in Dubai?" with its source, filters and field trust.

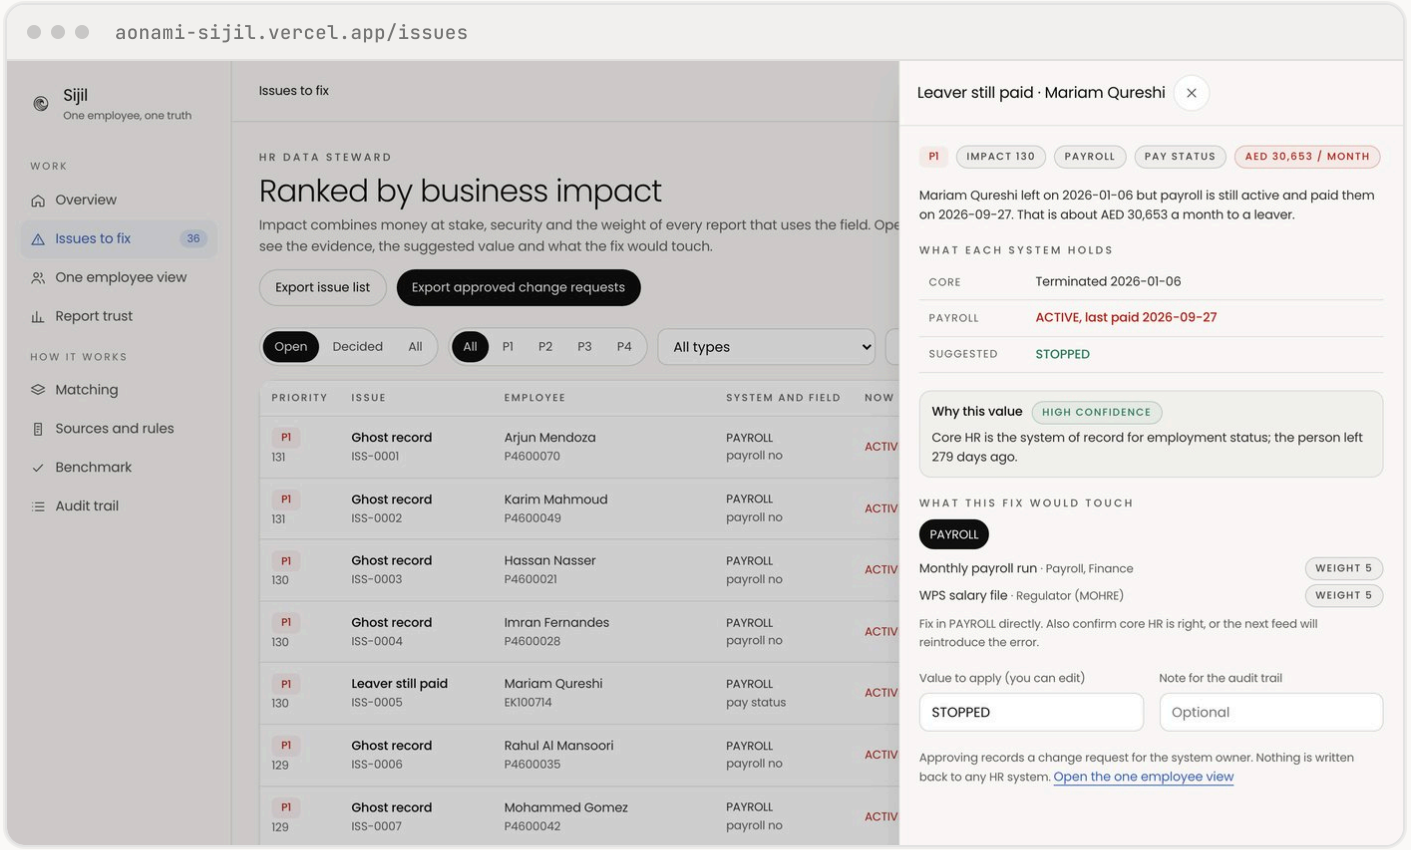

Report trust

Each report is only as good as its weakest field.

Issues by type

14 issue types, from ghosts to out-of-date records.

A leaver, still paid: the evidence and the fix.

Every system's value

Core: terminated 6 Jan 2026. Payroll: active, last paid 27 Sep 2026.

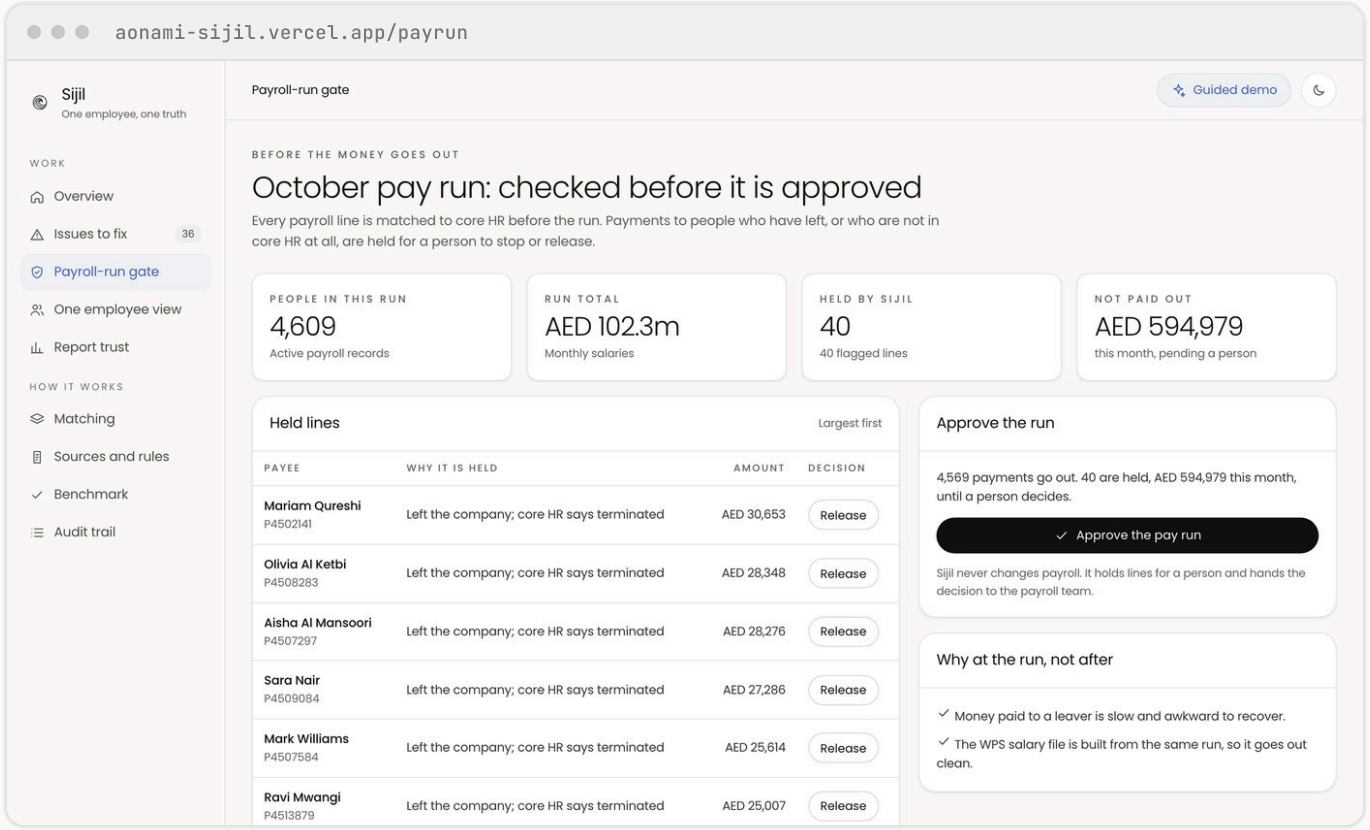

The suggested value, and why

STOPPED, high confidence: core HR is the system of record for status.

What the fix touches

The monthly payroll run and the WPS salary file.

The payroll-run gate: leaks are held before the money goes out.

- Every payroll line is matched to core HR **before the monthly run is approved**.
- On our sample: **40 lines held, AED 594,979 a month**, paid to leavers or to people core HR does not know.
- The run goes out on time and the WPS file is clean. **Sijil never changes payroll**; a person releases or stops each line.

WHY IT MATTERS

Money paid to a leaver is slow and awkward to recover. Holding it at the run turns a finding into money that never left.

Scored against an answer key, the way the challenge scores it.

Our own pack in the brief's shape: 5,000 people across core HR, payroll (different IDs, "LAST, First", DD/MM/YYYY), learning and the directory, with 322 planted errors across 14 types and 48 near misses that must not be flagged.

LIMITS WE DISCLOSE

We wrote this benchmark data ourselves, so it is easier than real data. Systems of record and sync windows come from the data dictionary and should be confirmed with each system owner.

WHAT WE EXPECT ON REAL DATA

Real data has shared emails, missing IDs and messier names. Expect more matches left for a steward rather than forced, and a lower first-run match rate until the system of record for each field is confirmed in weeks 1 to 2.

BENCHMARK ON OUR OWN SYNTHETIC PACK	RESULT
Records matched to the right person	14,805 of 14,805
Planted errors found (recall)	322 of 322
False positives (precision)	0 (100%)
Suggested value correct	254 of 254
Four more generated packs	Same results

Our own synthetic packs, where we also wrote the data. The official labelled pack is the real test.

Ranked by what each error breaks.

P1 | LEAVER STILL PAID | PAYROLL PAY_STATUS

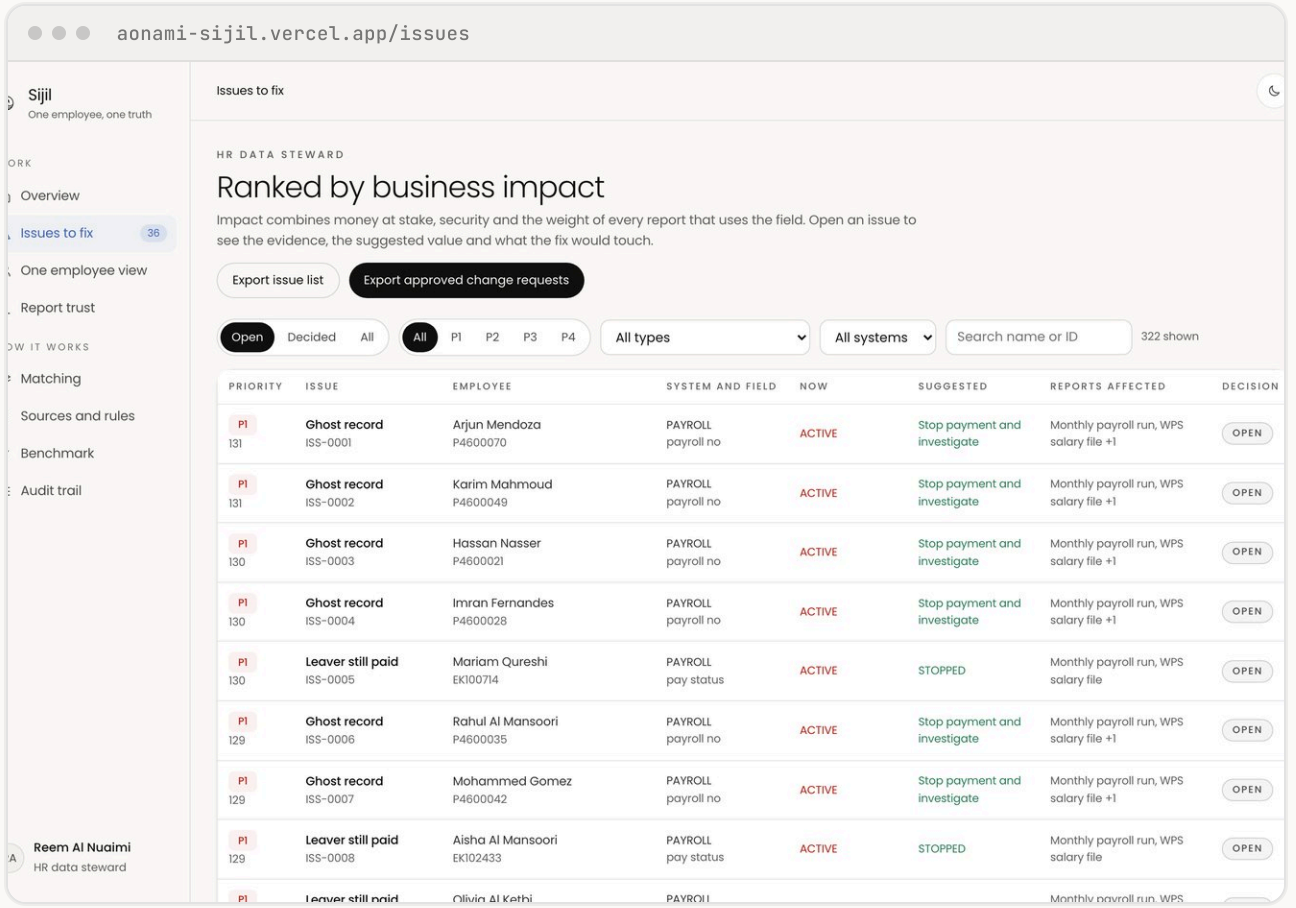

Mariam Qureshi left on 6 Jan 2026 but payroll paid them on 27 Sep 2026

About AED 30,653 a month to a leaver.

`CORE: Terminated 2026-01-06 · PAYROLL: ACTIVE, last paid 2026-09-27`

Suggested: STOPPED (high confidence). Core HR is the system of record for status.

- A ghost on payroll hits the payroll run and the WPS file, so it ranks above a duplicate.
- Fix in core HR and the feeds correct the rest; fix only downstream and it is overwritten.

Sijil suggests. A person approves.

A PERSON APPROVES EVERY FIX

Approve, reject or defer, with the value chosen and a note.

NOTHING WRITTEN BACK

Approved fixes become change requests for the system owner.

NO AI MODEL TOUCHES THE DATA

Matching and checks are readable, testable rules.

FULL AUDIT TRAIL

Every load and every decision, with the person and the time.

DATA STAYS IN EMIRATES' ENVIRONMENT

The tool only reads; outputs carry record IDs.

HONEST LIMITS

Ambiguous matches are flagged, never forced.

Designed for the UAE Personal Data Protection Law [3] and the principles of the UAE Charter for the Development and Use of AI [4].

Adding a source is configuration, not code. The 50+ HR applications can join one at a time.

1 **HR systems**

Read-only extracts or API pulls from each system.

2 **Sijil**

Static web app and command-line runner in a container. No outbound connection.

3 **Single sign-on**

Data steward, analytics lead, systems owner.

4 **Ticketing**

Change requests to the tool each system owner already uses.

	HOW
New source	A column profile and the system's authority per field in the data dictionary.
Schedule	Nightly runs; new and resolved issues tracked over time.
Trust over time	Trust scores show whether data quality is improving.
Writes back	Never. Sijil only reads.

Eight weeks, three systems to five.

WEEKS	WHAT HAPPENS
1 to 2	Connect core HR, payroll and the directory; confirm systems of record and report weights
3 to 4	First full run; data stewards review the top 200 issues; tune rules
5 to 8	Weekly runs; approved fixes to system owners; add learning and two more systems
End	Issues fixed, AED recovered, report trust before and after; go or no-go

WHAT WE NEED FROM EMIRATES

- Read-only extracts of core HR, payroll and the directory
- The data dictionary, with the system of record per field
- A data steward for each system
- A container host inside Emirates with single sign-on

WHAT WE MEASURE

- Issues fixed and confirmed by system owners
- AED recovered from payments in error
- Report trust before and after
- Steward time per issue

THE DECISION AT THE END

Go or no-go, on numbers agreed with Emirates before the pilot starts.

Every judging criterion, and where it is answered.

CRITERION	WEIGHT	SLIDES	STRONGEST EVIDENCE
Detection and matching accuracy	30%	7	14,805 of 14,805 matched; 322 of 322 errors found; 0 false positives
Explanation and prioritisation	25%	4, 5, 6, 8	Payroll-run gate holds AED 594,979 a month on our sample; Every system's value, the suggested value with its logic, impact ranking
Responsible AI and security	20%	9	A person approves every fix; nothing written back; audit trail
Deployability and reuse	15%	10	A new source is configuration: column profile and authority
Team and pilot readiness	10%	11, 13	8-week pilot from three systems to five

IN ONE LINE

One employee, one truth: every inconsistency explained, ranked by what it breaks, and fixed only when a person approves.

TRY IT LIVE

`aonami-sijil.vercel.app`

Press Guided demo. Runs on our synthetic data.

Compliance-grade data pipelines, entity matching and measured accuracy.

Jayesh Kumar Rout

JR

CO-FOUNDER, STRATEGY AND PRODUCT

IDfy: KYC and compliance, 60M+ verifications a month

OneCard: onboarding reporting engine for 6 banks

ON THIS BUILD

Owns the pilot plan and the relationship.
